Input jumlah Jam Kerja (Normal, Istirahat, Efektif & Lembur)

Pilih Packing Plant, No. Packer & Tanggal

Input internal & External trouble/downtime

Definisi & Catatan :

1. Semua satuan pengisian Working Hour, Internal Trouble, Eksternal Trouble & Other Eksternal Trouble adalah jam.
 - Misalnya ada trouble mekanikal 30 menit, maka diisi di internal trouble mekanikal 0.5
 - Misalnya jam efektif 3 jam 15 menit, maka diisi 3.25
2. Normal hours adalah total jam operasional PP/GP include Istirahat. Misal PP operasi 1 shift 8 jam (7 jam Kerja + 1 jam Istirahat), maka normal hour diisi 8 jam
3. Istirahat adalah jam istirahat yang ada di PP/GP
4. Efektif hour adalah lamanya mesin packer menyala & beroperasi. Bisa diketahui dengan rumus : Normal hours + Lembur – Istirahat – All Trouble (Internal+Eksternal+Other Eksternal)
5. Lembur diisi jika ada lembur.
6. Untukantisipasi mencegah kesalahan pengisian, maka dikunci perhitungannya formulanya adalah sebagai berikut :

$$(\text{Normal} + \text{Lembur}) = (\text{istirahat} + \text{Efektif} + \text{Trouble Internal} + \text{Eksternal} + \text{Other Eksternal})$$

Ketika angka yang diisi tidak cocok dengan formula diatas, maka pada saat klik submit, tidak akan tersimpan dan keluar jendela peringatan.

7. Untukantisipasi double pengisian data availability, Ketika tanggal & no. packer sudah pernah diisi sebelumnya, maka pengisian pada tanggal & no. packer tersebut tidak dapat dilakukan lagi. Jika akan melakukan perubahan data pada tanggal tersebut, bisa dilakukan dengan menu edit pada masing masing PP di Tab List

Untuk melihat yang sudah terinput bisa di pilih tab List.

Bisa memilih periode untuk menampilkan data list availability yang sudah terinput per periode. Dan juga bisa mencari PP yang dimaksud di kolom search.

Untuk mengekspor ke file excel. Bisa dilakukan dengan klik XLS

Di list yang tersedia bisa melakukan edit data atau delete data
